TRAN QUOC DUY KHOI

JAVA BACKEND DEVELOPER INTERN

Phone: (+84) 929 648 427 | Email: tranquocduykhoi@gmail.com | Availability: Full-time Internship
GitHub: github.com/DuyKhoi282 | Portfolio: duykhoi-portfolio.netlify.app

SUMMARY

Final-year IT student focused on Java backend development. Hands-on experience building layered web applications with Java, Spring MVC and MySQL, designing relational database schemas, and writing secure, parameterized SQL. Seeking a full-time Java Backend internship to build production-grade services with Spring Boot.

EDUCATION

University of Economics and Finance (UEF) Expected Graduation: 2027
Bachelor of Information Technology | Final-year student

TECHNICAL SKILLS

- **Languages:** Java, C#, SQL
- **Backend:** Spring MVC, Spring Boot, JPA / Hibernate, JSP & Servlet, ADO.NET
- **Databases:** MySQL, SQL Server – schema design, PK/FK constraints, JOINs, parameterized queries
- **Concepts:** OOP, MVC & Layered Architecture (Controller–Service–DAO)
- **Tools:** Maven, Git & GitHub

ACADEMIC PROJECTS

Travel Tour Booking System Academic Group Project
Role: Booking & Payment Module | **Tech Stack:** Java, Spring MVC, JSP, Servlet, MySQL, Maven
GitHub: https://github.com/vannld23/travel-tour-booking-system

- Built the booking and payment flow (create booking, payment, booking history) on a Controller–Service–DAO layered design.
- Wrapped booking and payment creation in a single database transaction with rollback to keep data consistent on failure.
- Prevented overbooking by checking remaining tour capacity before confirming, and releasing seats on cancellation.
- Enforced a booking state machine (Pending → Confirmed → Completed / Cancelled), rejecting invalid transitions.
- Added server-side validation for traveler count, departure date and contact information.

Restaurant Management App Academic Group Project
Role: Database Design, Menu Management & Revenue Report | **Tech Stack:** C#, WinForms, SQL Server, ADO.NET
GitHub: https://github.com/DuyKhoi282/Restaurant-App

- Designed the SQL Server database schema, defining primary/foreign key constraints and test datasets.
- Developed the Menu Management module with full CRUD operations for food items and food categories.
- Applied parameterized SQL queries to prevent SQL Injection and collation search for accent-insensitive filtering.
- Implemented safe-deletion business logic checking unpaid orders to preserve relational data integrity.
- Built a Revenue Report aggregating sales with SUM/COUNT queries and exporting results to Excel via EPPlus.

CERTIFICATIONS & LANGUAGES

- **English:** VSTEP 7.0/10 – CEFR B2 (2026) | IELTS 5.5 (2022)

ACHIEVEMENTS

- **Consolation Prize – Cybernet Competition 2025**: university-level cybersecurity competition UEF
